 Jennifer E. Novosad Primary Examiner Art Unit: 3634			

Continuation of 11. does NOT place the application in condition for allowance because:

Firstly, since the definition of "board" is a flat usually rectangular piece of material, element 19 is used to depict the "board" whereby albeit the "board" has a thickness, each of the surfaces is flat.

Secondly, with respect to the "parting line", applicant's argument's that "the arrows depicted by the examiner also extend over the front so that the statement that the parting line is free from the front is contrary and unreasonable" are considered to be more limiting than what is actually being claimed and therefore are not commensurate in scope with the claim. In particular, claim 1 sets forth that the "front free from a parting line" and then states that there is a "continuous parting line". The claim does not state that the front is free from the "continuous parting line". The examiner has viewed the continuous parting line as being different from any sort of parting line. Therefore, the device of Molin is free from a parting line of the front but also a "continuous" parting line.

Applicant's arguments that (a) "the peripheral edge ...is... not a parting line formed during an injection molding along an interface of two molding surfaces" and (b) "the product indicators... can be conveniently changed" are considered to be more limiting than what is actually being claimed since the claim does not recite this.
